628. Headband (destruct); iron, river pearls; the first half of the 17th century; field inventory no. 84

629. Remains of the iron cassette with the handle on the lid. Lockable with a key with a two-bolt lock (?), which was an integral part of the lid and covered its entire inner surface (keyhole in the central part). A fully preserved cylinder allows for the reconstruction of the key shape. Length of the shorter side 12 cm, estimated height 15 cm, estimated length approx. 22 cm. It was standing on four spherical legs. Analogies suggest that originally was engraved. There were gold coins inside. Mineralized thread scraps on several coins indicate that were lined with a patterned textile inside - burgundy-orange-white. Extremely poorly preserved (unlike other elements of the treasure). The lock elements, made of steel, are in better condition. Made in the first half of the 17th century and very typical of that era. Field inventory nos. 46-55, 85, 88, 650, 651.
